Automation Restaurant — New features

Accessibility, languages (the portal in Urdu, right to left), the AI voice in every language inside the modules, AI & Voice settings per module, and the phone layout fix. Screenshots from the live restaurant workspace; logos and personal data are blurred.

1 / 5

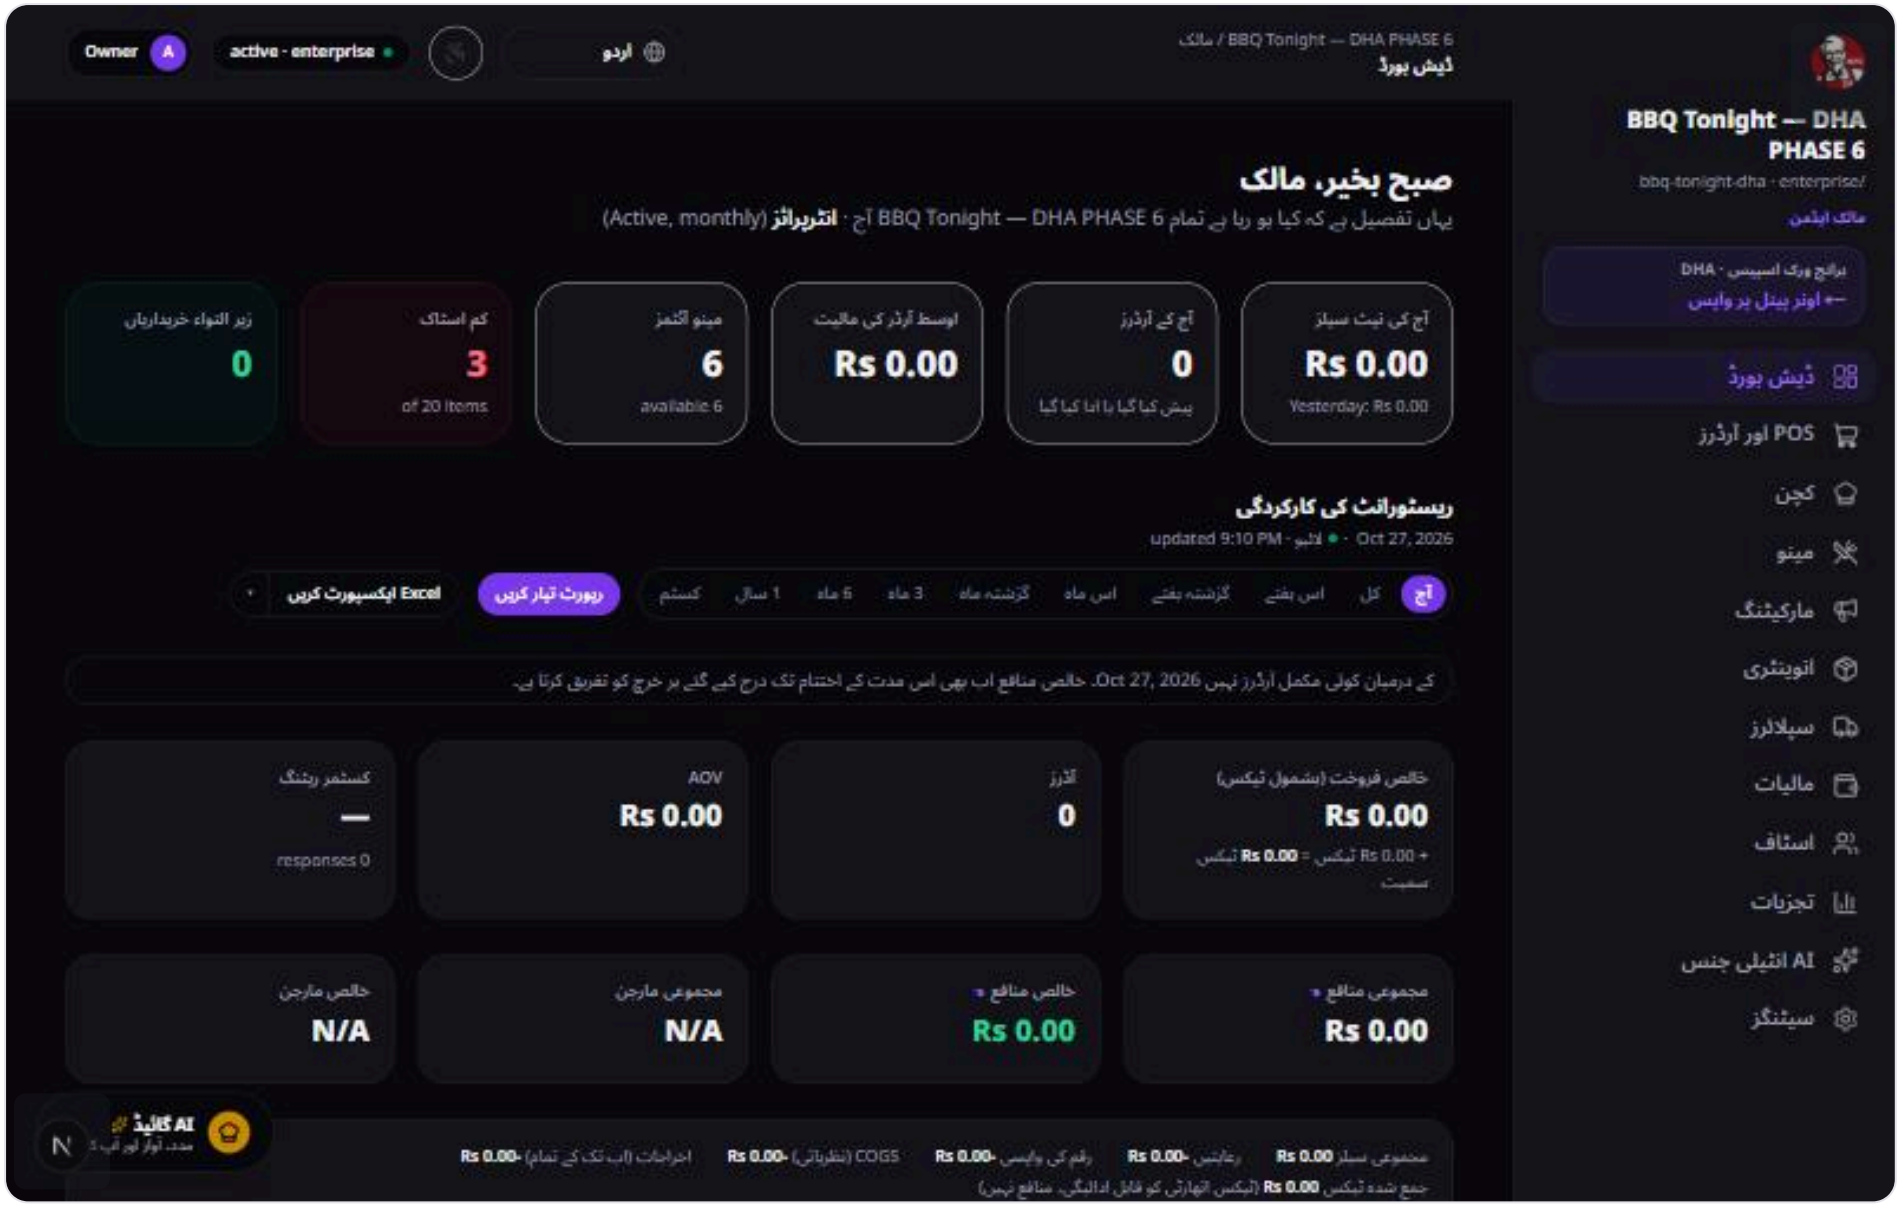

Accessibility

The ♿ menu in every header: text size 100–150%, high contrast, reduce motion, underlined links, wider spacing and larger touch targets. Shown here at 112% text with high contrast; amounts now wrap after the currency instead of splitting.

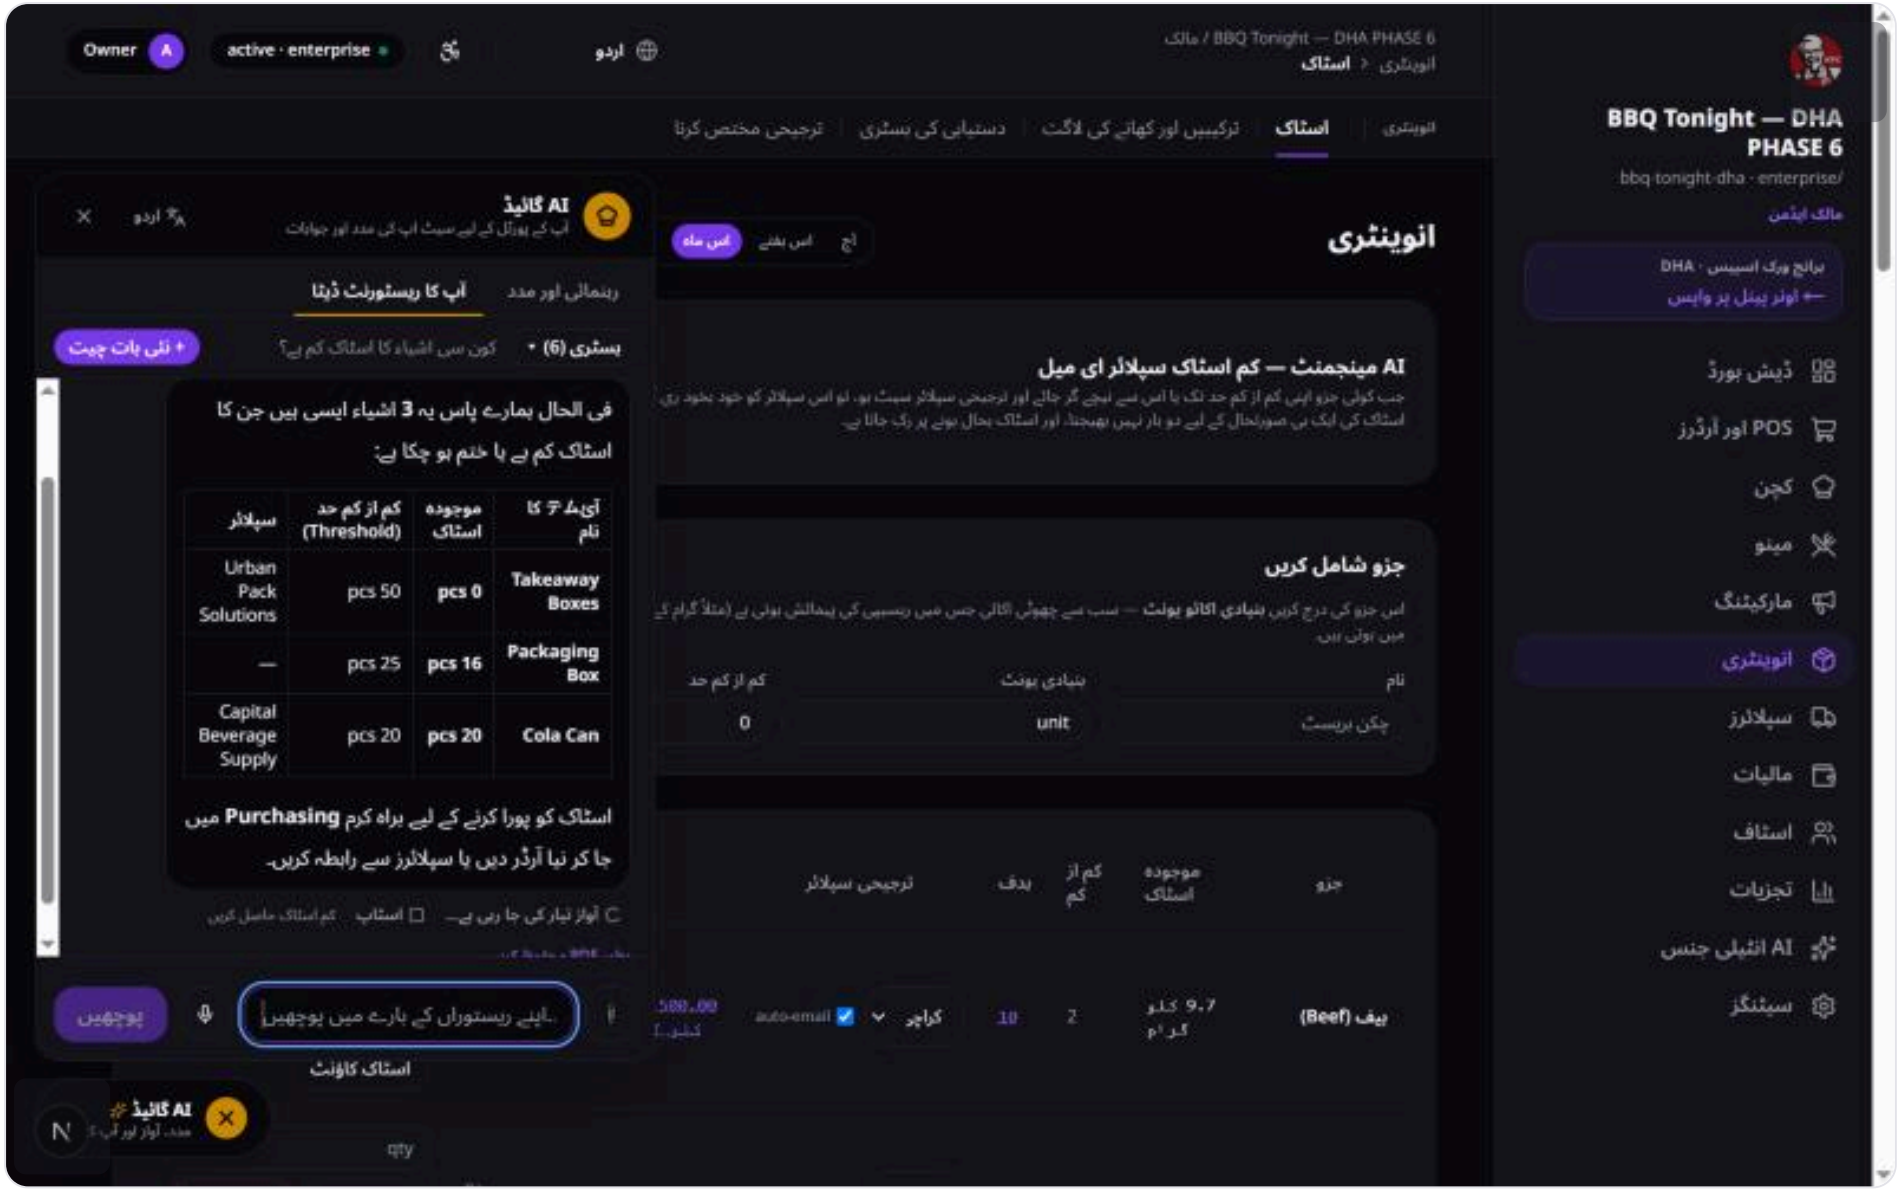

2 / 5 Languages — the manager dashboard in Urdu

The 🌐 language button switches every screen. Urdu is laid out right to left: menu, KPIs, filters and reports. 44 languages are available.

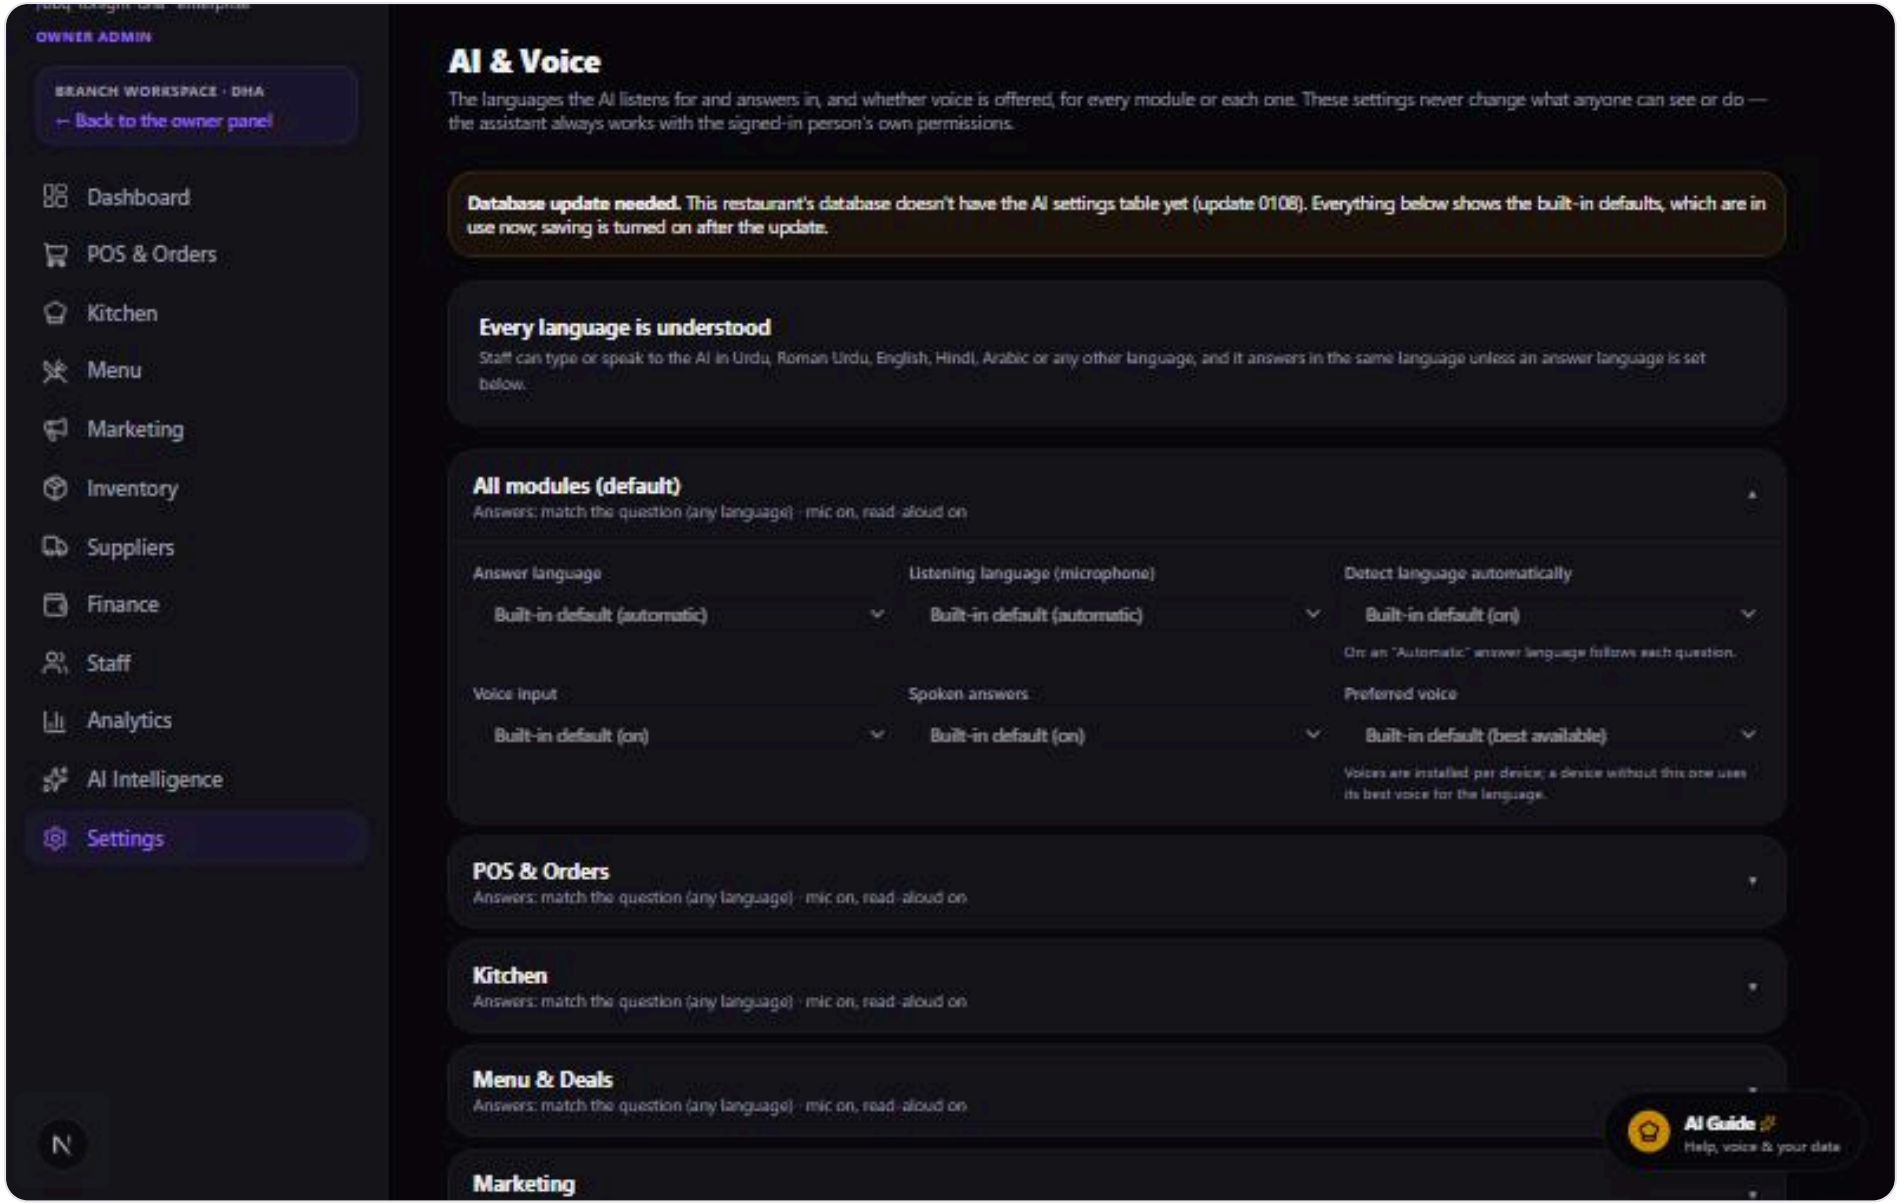

3 / 5 AI voice in a module — Inventory

In the AI Guide's "Your restaurant data" tab, an Urdu question is answered in Urdu from the live low-stock list. The answer is read aloud by the AI voice, even on a computer with no Urdu voice of its own.

4 / 5 AI & Voice settings for every module

For every module (POS, Kitchen, Inventory, Finance, …) or all at once: the answer and listening languages, automatic language detection, voice input and spoken answers. The AI understands every language.

5 / 5 Phone layout — navigation drawer

On phones and tablets the sidebar opens as a drawer (focus stays inside, Escape closes it), and screens such as the Kitchen Display use the full width.
